Spring Term 2

Year 4

PSHE/RSE

In PSHE, through our 'Healthy Me' topic, we will explore how to make healthy choices for our bodies and minds, and understand how friends and other people can influence our decisions. Children will learn how to stay safe, manage peer pressure and build positive, healthy relationships.

English

In English, we will develop our writing through character and setting descriptions, letters and balanced arguments, using Standard English, varied sentence structures and cohesive devices. Children will present travel information, take part in role-play and interviews, and discuss themes such as migration and resilience while building confidence in speaking and listening.

Maths

In Maths, we will solve problems involving measurement, including perimeter, area, time and money, while exploring shape, symmetry, coordinates and translations. Children will also analyse data using graphs and charts and continue to build fluency in the 7, 11 and 12 times tables.

Music

In Music, we will explore Fanfare for the Common Man, learning how composers use timbre, dynamics, texture and silence to create powerful musical effects. Children will also create music inspired by Spain, using habanera and triplet rhythms to compose and perform their own musical pieces.

Europe

Science

In Science, we will investigate how materials change state through processes such as evaporation and condensation. Children will explore how temperature affects solids, liquids and gases, and learn how these changes are linked to the water cycle.

PE

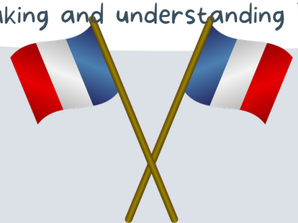
In PE, we will develop our basketball skills through dribbling, passing, shooting and teamwork, learning how to attack and defend in competitive games. Children will also improve their flexibility, strength, balance and control through yoga.

Religious Education

In RE, we will explore why Lent and Easter are such important times for Christians, learning about key events including Palm Sunday, Holy Week and Easter Sunday. Children will discover how themes of sacrifice, hope and new life are reflected in Christian beliefs and traditions.

French

In French, we will learn the names of different body parts and use colours and numbers to give simple descriptions. Children will follow and give instructions, take part in movement activities, and build confidence in speaking and understanding French.



Design and Technology

In DT, we will learn a range of stitching and finishing techniques to create a textile product, such as a bag or purse. Children will design, make and evaluate their work while exploring ways to join, secure and decorate fabric.

Computing

In Computing, we will learn how data can be collected, organised and presented to help answer questions and solve problems. Children will use and interpret different types of data while developing their skills in handling information accurately and responsibly.

Geography

In Geography, we will explore Europe's countries, capital cities and physical features, using maps and atlases to investigate the continent. Children will also learn about different European climates and biomes, and how these influence the way people live and use the environment.
